

I work in DC but live roughly 30 miles away in Maryland. I cannot receive terrestrial radio signals due to distance and hilly terrain. I listen to XM Radio to get updates on potential traffic problems and adjust my travel as needed. By adjusting my route to work to avoid traffic delays, I help in the elimination of commuter grid lock while helping the O-Zone by not sitting at idle in traffic. XM is subscription based service that I pay for. If XM started to broadcast commercials as does AM/FM stations, I would move onto another form of information / entertainment. Such as a PDA.  
The FCC should encourage technology not oppose it.
